

Create a website, where you can observe Mario walking to the castle.

Requirements:

- 1) On page load, Mario must walk towards the castle for a few seconds and stop.
- 2) Mario has to be start on the left side of the screen.
- 3) Castle has to be somewhere on the right side of the screen.
- 4) Positioning of Mario, castle and the ground must be flexible based on the viewport. Mario has to walk through majority of the viewport.
- 5) Mario and Castle must be on the ground.
- 6) You can use supplied images of Mario, castle and ground texture. However you cannot reference to them as external resources (they must be inlined one way or another).
- 7) There must be a gradient sky.
- 8) The page and layout of elements must work and make sense on any resolution between 360x480 and 2560x1440.
- 9) Output of the task is two files only - html and css. You can inline css if you prefer. You must not use javascript.

Example of output in one resolution is given. However, it's only a guideline, your result of the task might differ.
